

Appl. No. : 08/942,005
Filed : October 1, 1997

MARKED UP VERSION OF THE CLAIMS

35. (Twice Amended) A manager system for monitoring alerts regarding the status of components in an agent computer, the manager system comprising:

at least one processor, said processor configured to display a plurality of alert types to a user in a graphic display, each of said alert types corresponding to a status of components in the computer, said processor further configured to receive a plurality of unfiltered alerts from the agent computer, said alerts corresponding to an alert type; and

a user interface providing a description of said alerts to the user, the user interface configured to allow a user to selectively disable automatic display of one or more of said alerts by selecting or deselecting in said user interface at least one alert type corresponding to said alerts [one or more alert notifications related to said alerts for future display to the user when an alert occurs].
